## Program 0240

### End Stop with Rubber Buffer

| Order No. | Material                        | Weight [kg] |
|-----------|---------------------------------|-------------|
| 024111    | galvanized steel; rubber buffer | 0.190       |
| 024181    | stainless steel V4A             | 0.190       |

### End Stop without Rubber Buffer

| Order No. | Material            | Weight [kg] |
|-----------|---------------------|-------------|
| 024110    | galvanized steel    | 0.160       |
| 024180    | stainless steel V4A | 0.160       |

### Application Example for End Stop Assembly

#### Note

The end stop is fixed in the C-rail between the end clamp and the cable trolley. This helps to prevent cable trolleys running into the end clamp. For control supply systems with manually driven ideal control trolleys an end stop mounted at the end of the C-rail prevents the ideal control trolley from travelling out of the rail.

1) without buffer 2) with buffer 3) length of the towing trolley = 200 mm

#### Note

For a better sealing the standard rollers (ZZ) can also be provided with a 2 RS-sealing.  
The order-no. has to be completed with the variation designation .../010.  
For high speeds up to 100 m/min and/or silent running rollers with polyurethane bandage can be used.  
The order-no. has to be completed with the variation designation .../017.

Design in stainless steel V4A

# Cable Trolleys for Round Cables

## Program 0240

### Steel Cable Trolleys with Ball Joint for Cable Clips 020131, Light Series without Buffer

#### Technical details

- Trolley body: galvanized steel
- Ball joint: plastic
- Hardware: galvanized steel
- Standard rollers: ball bearings, galvanized with ZZ-sealing
- Temperature range: -30°C to +60°C
- Stainless steel rollers: ball bearings, V4A with 2RS-sealing
- Temperature range stainless steel: -10°C to +60°C

### Note

For a better sealing the standard rollers (ZZ) can also be provided with a 2 RS-sealing.  
The order-no. has to be completed with the variation designation .../010.

# Cable Trolleys for Round Cables

## Program 0240

Steel Cable Trolleys, Heavy Series  
for Clamping of Round Cables with a max. Difference in Diameter of 16 mm

Cable Trolley

Towing Trolley

End Clamp

### Technical details

- Trolley body and cable supports: galvanized steel
- Hardware: galvanized steel
- Standard rollers: ball bearings, galvanized with ZZ-sealing
- Temperature range: -30°C to +80°C
- Stainless steel rollers: ball bearing, V4A with 2RS-sealing
- Temperature range stainless steel: -10°C to +80°C

# Cable Trolleys and Accessories for Traversing, Program 0240

## Transfer Guide for C-Rail 024100

### Order No. 024107

- Material: galvanized steel
- Weight: 1.200 kg

### Notes

- Two transfer guides must be mounted at the transfer point with the inlet openings against each other
- The distance "s" must not exceed 18 mm
- Vertical deflection max. 2.0 mm
- Horizontal deflection max. 5.0 mm
- All cable trolleys, that pass this transition point must be provided with 3, the towing trolley with 4 pairs of rollers
- Cable trolleys that do not pass this transition point can be used in standard design

## Cable Trolleys for Flat Cables with Additional Rollers

### Technical details

- Trolley body and cable supports: galvanized steel
- Hardware: galvanized steel
- Standard rollers: ball bearings, galvanized with ZZ-sealing
- Temperature range: -30°C to +80°C

# Ideal Control Unit Trolleys

## Program 0240

### Ideal Control Unit Trolleys with Plug and Socket Connection – Basic Configuration

#### Technical details

- Protection Class Plug, IP54 in locked position
- Trolley body and cross bar: galvanized steel
- Hardware: galvanized steel
- Standard rollers: ball bearings, galvanized with ZZ-sealing
- Temperature range: -30°C to +80°C

#### Note

Ideal control unit trolley with basic configuration without end clamp and without cable glands  
Cables must be strain relieved

### Control Trolley Upper Parts

#### Technical details

- Trolley body and cross bar: galvanized steel
- Hardware: galvanized steel
- Standard rollers: ball bearings, galvanized with ZZ-sealing
- Temperature range: -30°C to +80°
- Stainless steel rollers: ball bearings V4A with 2RS-sealing
- Temperature range stainless steel: -10°C to +80°C

#### Note

For a better sealing the standard rollers (ZZ) can also be provided with a 2RS-sealing. The order-no. has to be completed with the variation designation ... / 010.

| Order No.  | Weight<br>[kg] |

### Basic Ideal Control Unit Trolleys for Round Cables

#### Technical details

- Trolley body and bracket: galvanized steel
- Hardware: galvanized steel
- Standard rollers: ball bearings, galvanized with ZZ-sealing
- Cable clips: plastic
- Temperature range: -30°C to +80°C

| Order No. | for Cable- $\varnothing$<br>[mm] | Weight<br>[kg] |
|-----------|----------------------------------|----------------|
| 024711-16 | 10 ... 16                        | 0.640          |
| 024711-25 | 17 ... 25                        | 0.660          |
| 024711-36 | 26 ... 36                        | 0.720          |

#### Note

These control trolleys are used if the round cable is installed directly and without an additional terminal box up to the control station.

# Accessories for Festoon Systems

## Program 0240

### Application Examples

#### Note

Special pendant station round cables with extruded steel ropes, that do not require separate tension relief devices, are listed in our cable catalog KAT0130-0002.

### Note

For attachment to the trolley with S-hook.

### Strap for Cable Bundle

# Helpful Hints

## Determination of the Load Capacity of C-Rails

### Technical details / bases of calculation

The permissible load of the C-rails can be determined with the help of the diagrams.

The following bases of calculation have been considered::

1. Beam on 2 supports, loaded by distributed load symmetrical to the beam center
2.  $\sigma_{\text{zul}} = 100 \text{ N/mm}^2$  without consideration of the lower flange stress
3.  $\sigma_V \leq 160 \text{ N/mm}^2$ , reference stress from bending stress and lower flange stress
4.  $f = l_A/250$  allowed deflection from load and self-weight of the C-rail
5. The loading is considered symmetrically distributed over all the track supports (brackets)

### Calculation example

Given:

|                                 |        |
|---------------------------------|--------|
| $F_{LW}$ = Load/trolley         | 18 kg  |
| $l_w$ = Length of cable trolley | 125 mm |
| $Z$ = Number of cable trolleys  | 10     |
| $L_b$ = Storage length          | 1.25 m |
| $(m) = Z \times l_w / 1000$     |        |

## Load Diagram for C-Rail 40 x 40 x 2.5 (024100 / 024104 / 024109)

required load capacity of the track support brackets [kg]

### Solution for C-rail 40 x 40 x 2.5

#### From diagram

- Required distance between the track support brackets  $[l_b] = 1.30 \text{ m}$
- Required load capacity of the track support brackets = 250 kg

# Helpful Hints

## Load Diagram for CI-Rail Reinforced (024052-6)

### Targets:

Load per trolley  $[F_{LW}] = 63$  kg; Length of cable trolley  $[l_w] = 400$  mm  
 Number of cable trolleys  $[Z] = 1$ ; Storage length  $[l_b] = 0.400$  m;  $(m) = Z \times l_w / 1000$

### From diagram:

Required distance between track support brackets  $[l_a] = 4.80$  m

## Load Diagram for CV-Rail Reinforced (024030-6)

### Targets:

Load per trolley  $[F_{LW}] = 18$  kg; Length of cable trolley  $[l_w] = 125$  mm  
 Number of cable trolleys  $[Z] = 10$ ; Storage length  $[l_b] = 1.25$  m;  $(m) = Z \times l_w / 1000$

### From diagram:

Required distance between track support brackets  $[l_a] = 1.85$  m

# Helpful Hints

## Technical Data

## Formulas to Determine the Number of Loops, Cable Length and Loop Depth

Number of loops:

$$n = \frac{f (l_s + e)}{2 \cdot h + 1.25 d_a - f \cdot l_w}$$

Storage length:

$$l_b \approx n \cdot l_w + e \text{ [m]}$$

System cable length:

$$L_{\text{Syst}} = f (l_s + l_b) \text{ [m]}$$

Total cable length:

$$L_{\text{Best}} = L_{\text{Syst}} + L_{\text{instE}} + L_{\text{instM}} \text{ [m]}$$

Loop length:

$$L_{\text{Schl}} = \frac{L_{\text{Syst}}}{n} \text{ [m]}$$

Loop depth:

$$h = \frac{L_{\text{Schl}}}{2} - 0.63 \cdot d_a \text{ [m]}$$

$d_a$  [m] = cable support diameter

$e$  [m] = free space in storage area  
(recommendation  $\geq 0.1$  m)

$f$  = recommended cable factor (see table)

$h$  [m] = loop depth  
(measured from top edge of cable support)

$h_{\text{ges}}$  [m] = loop depth  
(measured from lower edge of cable support)

$l_b$  [m] = storage length incl. free space

$l_s$  [m] = travel distance

$l_w$  [m] = cable trolley length

$L_{\text{Best}}$  [m] = total cable length

$L_{\text{instE}}$  [m] = installation length, end clamp side

$L_{\text{instM}}$  [m] = installation length, towing side

$L_{\text{Schl}}$  [m] = cable length per loop

$L_{\text{Syst}}$  [m] = required cable length  
(measured from mid of end clamp to mid of towing trolley or towing clamp)

$n$  = number of loops

# Helpful Hints

## Definition of the Cable Arrangement and Cable Trolley Selection

Example for flat cable trolleys

Example for round cable trolleys

1. Formula for calculating the approximate load per trolley  $F_{LW}$

$$F_{LW} \approx 2 \cdot h \cdot G_L \text{ [kg]}$$

$G_L$  [kg/m] = weight of the cable package

2. Selection of the cable trolley type
3. Required cable support diameter based upon minimum bending radius of the cables
4. Select cable support width  $b_z$  to accommodate the cable package width
5. Determine length of trolley  $l_w$

For round cables:

$$l_w \geq d_a + 2 \cdot d_{max} + 10 \text{ [mm]}$$

For flat cables:

$$l_w \geq d_a + 2 \cdot s + 10 \text{ [mm]}$$

Instruction help how to build the cable packet, please check MAL0200-0003

## Cable Factors

| Travel Speed<br>$v$ [m/min] | Cable Factor $f$ at $h$ [m] |           |         |           |         |
|-----------------------------|-----------------------------|-----------|---------|-----------|---------|
|                             | < 0.8                       | 0.8 - 1.2 | 1.3 - 2 | 2.1 - 3.2 | 3.3 - 5 |
| < 32                        | 1.10                        | 1.10      | 1.10    | 1.10      | 1.10    |
| 32 - 40                     | 1.15                        | 1.10      | 1.10    | 1.10      | 1.10    |
| 41 - 50                     | 1.20                        | 1.15      | 1.10    | 1.10      | 1.10    |
| 51 - 63                     | 1.25                        | 1.20      | 1.15    | 1.10      | 1.10    |
| 64 - 80                     | -                           | 1.25      | 1.20    | 1.15      | 1.10    |
| 81 - 100                    | -                           | -         | 1.25    | 1.20      | 1.15    |
| 101 - 120                   | -                           | -         | -       | 1.25      | 1.20    |

Depending on the operating conditions the cables must be installed with an additional cable length. The additional length is calculated by taking into account the cable factor  $[f]$ . We recommend to select the cable factor according to above table.

For values outside the gray area, please contact us directly. Special precautions might be required in those cases under extreme operating conditions, such as the installation of shock cords.

## Permissible Loads of the Rollers

| Travel Speed<br>$V$ [m/min] | Average running time per day<br>[h] |       |        |        |        |
|-----------------------------|-------------------------------------|-------|--------|--------|--------|
|                             | < 4                                 | 4 - 8 | 8 - 16 | -      | -      |
| < 16                        | < 4                                 | 4 - 8 | 8 - 16 | -      | -      |
| 16 - 32                     | < 2                                 | 2 - 4 | 4 - 8  | 8 - 16 | -      |
| 32 - 63                     | -                                   | < 2   | 2 - 4  | 4 - 8  | 8 - 16 |
| 63 - 80                     | -                                   | -     | < 2    | 2 - 4  | 4 - 8  |
| 80 - 100                    | -                                   | -     | -      | < 2    | 2 - 4  |

| Type of Roller [ø 32 mm]      | Permissible Load of the Rollers<br>[kg] |    |    |      |    |
|-------------------------------|-----------------------------------------|----|----|------|----|
|                               | 50                                      | 40 | 32 | 25.0 | 20 |
| Ball Bearing, galvanized      | 50                                      | 40 | 32 | 25.0 | 20 |
| Ball Bearing V4A              | 25                                      | 20 | 16 | 12.5 | 10 |
| Ball Bearing with PUR Bandage | 25                                      | 20 | 16 | 12.5 | 10 |

The lifetime of the rollers depends on the load (Hertzian stress) and the frequency of operation.

The proper selection, based on travel speed, average running time per day (based on one year) and permissible load of the trolleys with various roller types, can be made by using the above table.

# Your Applications – our Solutions

The solutions we deliver for your applications are based on your specific requirements. In many cases, a combination of several different Conductix-Wampfler systems can prove advantageous. You can count on Conductix-Wampfler for hands-on engineering support together with the optimum solution to safely meet your needs.

## Cable and Hose Reels

Motor driven and spring driven reels by Conductix-Wampfler provide energy, data and media over a variety of distances, in all directions, fast and safe.

## Festoon Systems

Conductix-Wampfler cable trolleys can be used in virtually every industrial application. They are reliable, robust and available in an enormous variety of dimensions and designs.

## Conductor Rails

Available as enclosed or multiple unipole systems, Conductix-Wampfler conductor rails reliably move people and material.

## Inductive Power Transfer

The no-contact system for transferring energy. For all tasks that depend on high speeds and absolute resistance to wear.

## Non-insulated Conductor Rails

Robust, non-insulated aluminum conductor rails with stainless steel cap provide the ideal basis for power supply of people movers and transit networks.

## Radio Remote Controls

Safety remote control solutions customized to meet our customer needs with modern ergonomic design.

## Reels, Retractors and Balancers

Available for hoses and cables, as classical reels or high-precision positioning aids for tools, we offer a complete range of reels and spring balancers.

## Jib Booms

Complete with tool transporters, reels or an entire media supply system – safety and flexibility are key to the completion of difficult tasks.

## Slip Ring Assemblies

Whenever things are really "moving in circles", the proven slip ring assemblies by Conductix-Wampfler ensure the flawless transfer of energy and data. Here, everything revolves around flexibility and reliability!

## Mobile Control Systems

Mobile control solutions for your plant – whether straightforward or intricate. Control and communication systems from LJU have been tried and tested in the automotive industry for decades.

## ProfiDAT®

This data transfer system is a compact slotted waveguide that can also be used as grounding rail (PE) at the same time.

## Charging Solutions

Whether inductive or conductive, this bundle of products offers always the perfect solution for all industrial charging tasks including the matching battery with integrated battery management system.
